

# Uranus Spring 2005: "A Closer Look"

Dave and Hofstadter P.I.

AAE 9th graders

Uranus image taken by the VLA at K-band (1.3 cm). Notice the two hemispheres look symmetric

Rocklin Academy 6th graders

On May 26, 2005 GAVRT students from Alabama, California, and Puerto Rico conducted simultaneous measurements of the planet Uranus with the DSS-12 antenna as Primary Investigator, Dr. Mark Hofstadter, conducted measurements using the Very Large Array (VLA). 62 students were able to interact with Dr. Hofstadter *live* on a teleconference during the data collection process.
